

Cobetter Topene™ RB Film Single-use System

Lifecube™ Single-use System

Single-use System (SUS) is a process equipment solution that offers advantages such as lower upfront costs, no cleaning requirements, and accelerated research and production progress compared to traditional stainless steel systems. It has been widely adopted in the biopharmaceutical field for various processes ranging from cell culture to drug formulation, including vaccines, antibodies, gene therapies, and cell therapies.

Cobetter Lifecube single-use product series is exclusively designed by Hangzhou Cobetter Filtration Equipment Co., Ltd. The products are manufactured following ISO 9001:2015 quality management system and adhere to GMP requirements. With 11 ISO 7 & ISO 8 production lines and one fully ISO 4.8 classified line, Cobetter can offer convenient and efficient single-use solutions that meet regulatory standards for biopharmaceutical and other industries.

Single Use System (SUS) Assembled From Various Components

Storage Products: 2D&3D Storage Bags (Standard and customized options)

Mixing Products: 3D Mixing Bags (Standard and customized options)

Filling Product: Filling Bags (Customized options)

Single-use Accessories: hose barb fittings, easy connectors, sterile connectors, tubings, sampling system, filling needles, single-use pressure sensors. (Various specifications and models available.)

Cobetter single-use system consumables are suitable for various application scenarios in pharmaceutical manufacturing operations, providing customers with greater flexibility and convenience in adopting single-use technologies. Cobetter Lifecube products simplify processes, enhance production efficiency, streamline validation, and ensure product safety.

Features

- The film materials exhibit low extractables, low leachables, good physical strength, chemical compatibility, and biocompatibility
- Easy to process judgment for high transparency film
- Meet the requirements of various solutions storage and transfer in the biopharmaceutical process
- Flexible custom size and tubings for various processes

Applications

- Buffer and media preparation, storage, and transfer
- Preparation of bioreactor feeds
- Purified components collection
- Storage for purified intermediates
- Storage and transfer for stock solution
- Drug formulation final filling

Customized Solutions

Cobetter Lifecube single-use system offers a wide range of highly customizable films, tubings, connectors, filters, and other components to meet diverse customer needs.

Film

Topene RB film;

Bags

2D storage bags, in addition to standard volumes, can be customized to fit different containers in a 2.5D format, such as 60 L, 208 L, etc.

3D storage and mixing bags can be customized to cover volumes ranging from 10 L to 3000 L, fitting various container sizes.

Mixing Impeller

Compatible with Cobetter mixing systems and leading market brands, various magnetic suction and magnetic suspension mixing stirrers available;

Tubing

Ranging from 1/16" to 1" inner diameter, the quantities and specifications of tubing can be customized;

Connectors

Multiple types and sizes of connectors are available;

Sampling

Needlefree swabable valve, sampling plug, male and female Lure Lock;

Vent Filters

Cobetter Bricap V50 / V50A / V50D / V42 available;

Capsule Filters

Cobetter Bricap C / L / T series.

Cobetter Topene™ Film

Film Structure

Cobetter Topene RB blown film designed for biological processes is composed of ULDPE (ultra-low density polyethylene), EVA (ethylene-acetic acid ethylene copolymer), EVOH (ethylene-vinyl alcohol copolymer) and LDPE (low density polyethylene)

The ULDPE layer with low extractability, low precipitation, good chemical compatibility and biological safety is used as the liquid contact layer. The EVA layer has good resistance to flexural cracking and the EVOH layer minimizes gas diffusion of the film. The outer LDPE layer provides strong puncture resistance, strength and excellent thermal stability.

The Topene RB film has a ultra clean inner surface, good environmental stress resistance, tear resistance, rubbing resistance, tensile resistance, chemical stability and biological safety.

Note: RB film is 11-layer co-extruded film, and only the functional layers are shown in the schematic.

Film Process

Film Process	Film Cooling	Production Environment	Characteristic	Co-extrusion Film Blown Equipment
Blown film	Vacuum water ring	The inner layer of the film is over ISO class 5. The outer layer of the film is ISO class 7.	1. The film is extremely clean because the inner layer is not in contact with the workshop environment. 2. The physical strength of the film is excellent because it is stretched horizontally and vertically during the processing.	

Benefits

- Ultra cleanliness inner surface
- Excellent gas barrier property
- Extreme durability for superior strength
- Good chemical stability
- Good cell compatibility

Applications

Cobetter Topene RB film has performed a comprehensive validation, which has low extractable and precipitate levels and good cell compatibility, and there is no potential risk of introducing impurities into the biological process. Topene RB film can be applied to the whole biopharmaceutical process such as upstream cell culture, configuration and storage of buffer and medium, and preparation filling.

Lifecube™ MIX Single-use Mixing Bags

Cobetter Lifecube single-use mixing bags offer no-clean, many specifications, pre-sterilization, easy to install and flexibility of use, etc. The Lifecube Single-use Mixing bags are made of multi-layer co-extrusion film, feature good physical and chemical properties and extremely low gas permeability. Lifecube single-use mixing bags are suitable for a wide range of mixing steps in upstream and downstream processes.

Quality Assurance

- ISO 9001:2015 quality management system
- ISO Class 4.8 / ISO 7/ ISO 8 cleanroom production
- 100% leak testing
- ADCF raw materials, complies with FDA 21 CFR Part 177-182 (Indirect food additives)
- Meet the requirement of current USP <87> Class VI, Biological Reactivity Test, In Vitro
- Meet the criteria of current USP <88> Class VI, Biological Reactivity Test, In Vivo
- Aqueous extraction contains < 0.25 EU/mL as determined by Limulus Amebocyte Lysate (LAL), USP <85>
- Particulate matter in the product eluent meets the requirements in USP <788> for large volume parenterals
- Verified gamma irradiation dose according to ISO 11137

Features

- Magnetic suction/magnetic suspension mixing, integrated/split system, compatible with other brands;
- Fast installation, well mixing run and easy setup;
- Double-layer packaging, sterilized by 25~45 kGy gamma irradiation;
- Many specifications, meeting a variety of preparation applications;
- Customized bag sizes, flexibly match different specification of containers;
- Customized Tubings, connectors and filters ;
- Sensors can be customized to allow on-line monitoring during the process;
- Hardware with audit trail and automatic management functions available.

Applications

- Buffer and culture medium preparation
- Semi-finished products preparation
- Batch mixing
